

Week 7 Assessment:

1. What is a “Version” and why are they used?

A version is a specific point in time in the history of the model that can always be restored. When sharing documents, the last saved version is used. Versions capture snapshots of the design process.

2. Describe what FeatureScript is.

Featurescript allows you to create your own custom features in Onshape that you can share with the rest of the Onshape community? They behave just like any other Onshape feature because they are written using the same language.

3. Give two examples of custom features.

Rib, Screw Boss, etc.

4. Does Onshape’s history clear itself when you close your browser window or logout of Onshape?

No, Onshape’s history is permanent and forever.

5. Can features be re-ordered in Onshape, if so how?

Yes, simply click on a feature and drag it up/down the feature list.
